

TOPICS TO COVER

• Base Types

①

②

Q.?

- What type
- Drive through code
- Accurate Movement
- Reference Adjustment
- Movement Sensitivity
- Automation (IMP)

• Path Planning

Q.?

- Optimum Path
- Accurate & Repeatable
- Minimum Slip
- Simple Co-ordinate Coordination
- Autonomous
- Location Presence of S. & R.
- Obstacle Knowledge

• Microcontroller Co-ordination

Q.?

- 48MHz
- Multiple Interrupt

- Type of Communication b/w MC's (No lag)
- Dual MC's Coordination
- Mutual Feedback & Adjustments
- Response Time
- Command Distribution & Interpretation

Automatic to Manual Switching

Q.?

- Reference Adjustment
- Autozeroing based on Base Location
- Feed back Return to Automatic

Remote

Q.?

- Button Quantity
- Aesthetics & Ergonomics
- Component & Battery Placement
- Used MC $\rightarrow$ STM 32
- Order of Use is Logical

• Misc Repeat & Adjustments (If Necessary)

Peripheral Connections to MC

Q.?

- Type of External Peripheral
- Type of Communication Needed with Peripherals
- Pin Allocation & Apt Placements.

• PCB Layout and Orientations

Q.?

- Type of Connector
- Dimension of PCB
- Handmade or PCB
- Degree of Modification
- Easy Connect and disconnect

• MC Layout & Capabilities

Q.?

- Pin availability
- Error of Code Upload
- Processing Speed
- Adaptability / Pin Requirement
- Compactness & Size/price

• Peripheral Needed

• Motor driver

• Encoder

• Relay

→ Actuators

→ Lasers

→ Sensors (Distance)

• (Voltage)

Q.?

• Max optimization

• Positional Adjustment

• Batteries

Q.?

• 7.4 / 22.2V / 12V Type

• Connector Type

• Charging Module

• Safety Setup & Backup

• Programming

Qr 3

#include <A2K23.h>

- Shooter to Distric
Travelled Adjust
- Angle and Speed
of Launch based
on Global Position
Adjustment.
- Height Based on Mount.
- Obstacle and Arena Based on Global
Coordinate System.
- Logical interpretation irrespective of Manual
Command
- Formula Calculation & Feedback (Optimized)
- Programmer Side Simple Stand Execution
and Return (Both True Feature)

- Alpha Library
- Simple Path Coordinate
Allocation
- Auto adjustment from
Distance to Encoder
Value and vice versa
- Simultaneous Movement
Synchronization

Point Interpretation
& Scale Complete
QV
